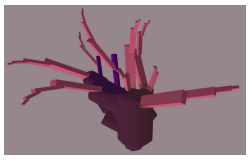
Synopsis

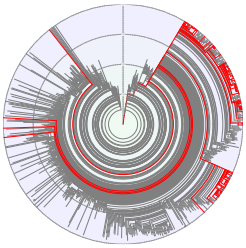
A-Life Researcher on the Emergence of Cognition

After a PhD thesis focused on artificial plant-like lifeforms and their dynamics at the evolutionary scale, I plan on returning to my core interest: artificial cognition. More specifically, my objectives are to investigate the mechanisms by which high-level forms of interaction can be built upon low-level inputs/outputs, especially in response to environmental constraints.

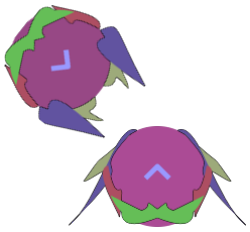
Interests



Morphogenetic Engineering[9]



Species Dynamics[7, 5]



Artificial Cognition[1]

Toulouse University, France
Thesis title: *"Environment-driven speciation: long term interactions in artificial plant communities"*
Investigated how complexification of artificial creatures could be further enhanced by moving the control apparatus around the abiotic component of an ecosystem.
